ChestAI RADIOLOGY PLATFORM

Deep Learning Diagnostic & Explainability Consultation Report

REPORT ID: CAI-2610062100
DATE: 2026-10-06 21:00
STATUS: PRE-READ COMPLETE

Patient MRN: CLI-PT-001	**Age / Sex:** 65 y/o / Unspecified	**Projection:** PA (Posteroanterior)
Indication: CLI automated headless diagnostic evaluation.	**Sensitivity Threshold:** 50%	**Triage:** MODERATE PRIORITY · ACTIONABLE FINDING

QUANTITATIVE PATHOLOGY ASSESSMENT

Target Pathology	Predicted Probability	Cutoff	Classification Result	Calibration
Cardiomegaly	**99.9%**	50%	**POSITIVE (Detected)**	Temperature Scaled
Pleural Effusion	**0.3%**	50%	**NEGATIVE (Clear)**	Temperature Scaled
Atelectasis	**2.5%**	50%	**NEGATIVE (Clear)**	Temperature Scaled
Edema	**0.4%**	50%	**NEGATIVE (Clear)**	Temperature Scaled

IMAGING & GRAD-CAM EXPLAINABILITY ATTENTION

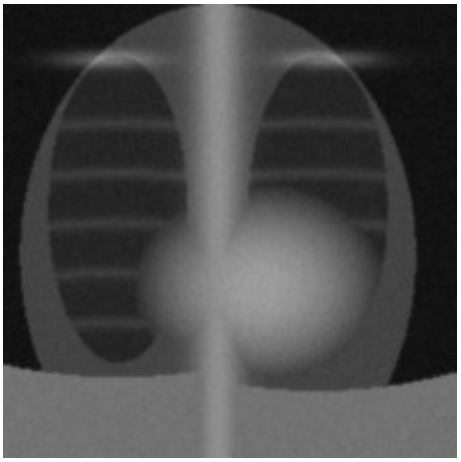

Figure 1: *Original Chest Radiograph*

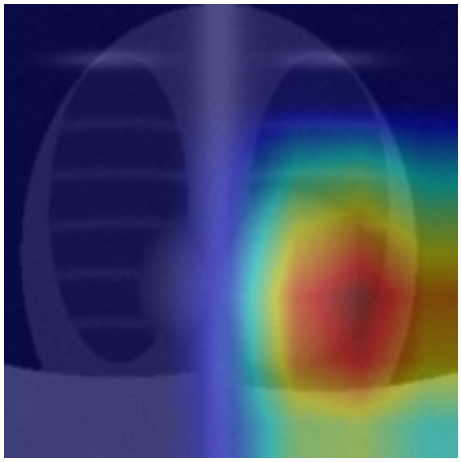

Figure 2: *Grad-CAM Heatmap Attention Overlay*

STRUCTURED IMPRESSION & CLINICAL ACTION PLAN

Impression:	Radiograph exhibits salient features consistent with **Cardiomegaly** above the specified operating threshold (50%). Attention heatmaps demonstrate corresponding anatomical activation.
Action Plan:	• • Echocardiographic assessment recommended to evaluate left ventricular ejection fraction and valvular anatomy.

CLINICAL DISCLAIMER & RESEARCH NOTICE: *ChestAI is an investigational deep learning research platform. Outputs are probabilistic assistive recommendations and do not constitute an official medical diagnosis. All interpretations must be validated by a credentialed radiologist before altering patient*

management.
